The Porter Twp Fire Dept. will begin testing their STORM WARNING siren on the first Tuesday of each month during Tornado Season (April thru July) at 7:30 PM. The test will consist of a 3 minute SOLID BLAST. Any questions regarding this, please call the station.

When a Tornado or Severe Thunderstorm Warning is received from a reliable source, such as the Scioto County Sheriff's Department or The National Weather Service, a three minute steady blast will be sounded from the sirens located within the township.

At this time all precautions should be taken to protect life and property. Do not call the fire department or the Sheriff's Department; all advice will be given by your local radio station.
